Application of Refractories in Cement Industry

With the advent of larger, more energy efficient cement plants, the rotary kiln and allied machinery are required to withstand longer periods of continuous operation. This requires different types of refractories that must suit the operating conditions in the different zones, in order to achieve balanced service life for the entire kiln.

CUMI has a variety of products to meet the requirements of cement plants. CUMI also has the ability and experience to offer all technical services related to design and installation of refractories.
